

Energiekontor Group

Energiekontor AG is a wind farm development and wind farm management company, which is active in a number of European countries. As a “complete service” company we manage our projects from the initial site selection through planning, building and fund sales to operation and management of the running wind farm.

Energiekontor was founded in 1990 as a private and independent company to plan wind farms and quickly diversified into fund sales and management of its operating wind farms. The Company was floated on the “new market” stock exchange in Frankfurt in 2000 and has been quoted on the “regulated market” in Frankfurt since 2002. The founders of the company are still majority shareholders.

The first wind farms were generating in 1994 and by 1997, Energiekontor had 12 operating wind farms capable of producing enough electricity for 50.000 people.

Energiekontor was the first wind farm project developer in Germany to plan wind farm projects in other European countries and has been active outside Germany since 1995.

Energiekontor now has over 60 wind farms with a total of around 400 wind turbines (over 400 MW, megawatts) operating in Greece, Portugal, the UK and Germany. The UK is seen as Energiekontor’s most important market outside Germany.

Energiekontor’s wind farm projects are financed by investment from private individuals. To date, over 5000 individuals have invested in our projects and more than half of these have invested in two or more wind farms. Energiekontor is an independent company and does not have ties with any particular wind turbine manufacturer or electricity company.
